

Human FAP Protein

Cat. No. FAP-HM101

Description

Source	Recombinant Human FAP Protein is expressed from HEK293 with His tag at the N-Terminus. It contains Leu26-Asp760.
Accession	Q12884-1
Molecular Weight	The protein has a predicted MW of 86.1 kDa. Due to glycosylation, the protein migrates to 90-100 kDa based on Bis-Tris PAGE result.
Endotoxin	Less than 1EU per μg by the LAL method.
Purity	> 95% as determined by Bis-Tris PAGE

Formulation and Storage

Formulation	Lyophilized from 0.22 μm filtered solution in 20mM Tris,0.25M NaCl (pH 8.2). Normally 8% trehalose is added as protectant before lyophilization.
Reconstitution	Centrifuge the tube before opening. Reconstituting to a concentration more than 100 $\mu\text{g}/\text{ml}$ is recommended. Dissolve the lyophilized protein in distilled water.
Storage	-20 to -80°C for 12 months as supplied from date of receipt. -80°C for 3 months after reconstitution. Recommend to aliquot the protein into smaller quantities for optimal storage. Please minimize freeze-thaw cycles.

Background

Fibroblast activation protein (FAP) is a serine protease that has been reported in fibroblasts and some carcinoma cells, which correlates with poor patient outcomes. FAP can be induced under hypoxia which is also vital in the malignant behaviors of cancer cells.

Assay Data

Bis-Tris PAGE

Human FAP on Bis-Tris PAGE under reduced conditions. The purity is greater than 95%.

ELISA Data

Human FAP, His Tag ELISA

0.2 μg Human FAP, His Tag Per Well

Immobilized Human FAP, His Tag at 2 $\mu\text{g}/\text{ml}$ (100 $\mu\text{l}/\text{Well}$) on the plate. Dose response curve for Anti-FAP Antibody, hFc Tag with the EC50 of 12.3ng/ml determined by ELISA (QC Test).

Human FAP Protein

Cat. No. FAP-HM101

Assay Data

Bioactivity Data

Measured by its ability to convert the substrate benzyloxycarbonyl-Gly-Pro-7-amido-4-methylcoumarin (Z-GP-AMC) to Z-Gly-Pro and 7-amino-4-methylcoumarin (AMC). The specific activity is >3000 pmol/min/μg (QC Test).
